

Shobhit Jajoo

Software Engineer | B.Tech Computer Science | VIT Chennai
jajooshobhit@gmail.com • +91 8955726633 • Chennai, Tamil Nadu

Summary

Third-year B.Tech Computer Science student at VIT Chennai with strong academic performance (CGPA 9.1) and a focus on building efficient, real-world software systems. Hands-on experience developing applications in C++, Python, and Kotlin across mobile, web, and systems domains. Passionate about clean code, problem-solving, and growing as a software engineer through practical development work.

Skills

Languages: Python, C, C++, Kotlin, R

Web Development: HTML, CSS, JavaScript, React

Databases: SQL, MongoDB

Tools & Concepts: Git, REST APIs, Data Structures & Algorithms, Android Development, Pandas, Scikit-learn, XGBoost, SHAP, FastAPI, Streamlit

Projects

AI-Powered Credit Risk & Scoring System *Python, Scikit-learn, XGBoost, Pandas, FastAPI, Streamlit*

- Developed an interpretable 0–1000 credit-risk score with SHAP-based explanations and deployed predictions through a FastAPI backend and Streamlit dashboard.
- Engineered behavioural and financial features from multiple credit-history tables and compared Logistic Regression, Random Forest, and XGBoost models using ROC-AUC, PR-AUC, precision, recall, and F1.
- Built an ML-based credit scoring system using the Home Credit dataset to predict loan default probability from customer history.

Cinema Movie Display Application *Mobile App*

- Integrated TMDB API to fetch real-time movie data including posters, ratings, trailers, and show details.
- Displays currently running and upcoming movies with search, filters, and detailed views.
- Implemented optimized API calls and image caching for fast loading and seamless UX.
- Achieved 40% faster load time and 30% reduction in data usage.

Search Engine Optimization Tool *C++*

- Built a C++ search engine with inverted index and ranked query retrieval.
- Indexed 1,000+ documents and handles 1,000+ search queries with low latency.
- Implemented efficient indexing, tokenization, and ranking mechanisms.
- Reduced average query response time by 35% using optimized data structures.

Healthcare Workforce Optimization Engine *C++*

- Developed a healthcare staff scheduling engine considering availability, workload, certifications, and role requirements.
- Reduced manual assignment time by 60% through automated optimization.
- Uses a custom priority-aware scheduling algorithm to minimize conflicts and ensure balanced workload distribution.

Education

Bachelor of Technology — Computer Science | Vellore Institute of Technology, Chennai

CGPA: 9.1 / 10 • Expected Graduation: 2028

Class XII — 92% • 2024

Class X — 93.5% • 2022

Certificates & Coursework

H HackerRank

SQL (Intermediate)
Verified Achievement

H HackerRank

Problem Solving (Basic)
Verified Achievement

DSA Data Structures & Algorithms

Code Help — Completed

Coding Profiles & Activities

LeetCode

150+ problems solved across arrays, strings, trees, stacks, and dynamic programming; focused on time and space optimization.

<https://www.linkedin.com/in/shobhit-jajoo/>

GitHub

Active repositories covering C++, Python, and Android (Kotlin) projects with clean commit history.

<https://github.com/shobhit-jajoo>

HackerRank

Certified in SQL and Problem Solving. Regular practice in algorithms and data structures.

Portfolio

Personal site (shobhitjajoo.in) showcasing selected work and contact details.

► **Member — Newton School of Coding Club** Active member participating in coding sessions, peer learning, and collaborative development.
